

Regulatory Positioning Statement

NexusWealth Foundation Ltd., incorporated in the British Virgin Islands (BVI), is structured as a **non-profit entity** with the primary purpose of supporting the NexusWealth ecosystem. Its activities focus on administering governance mechanisms, managing a decentralized treasury, and promoting the growth of blockchain-based asset management solutions.

The **NWIS token** is designed exclusively as a **governance and participation token**. It enables token holders to:

- Submit and vote on proposals for ecosystem development.
- Influence the allocation of DAO treasury resources.
- Participate in community decision-making processes.

Importantly, the NWIS token **does not confer equity, profit-sharing rights, or ownership** in NexusWealth Foundation Ltd., NexusWealth LLC, or any affiliated entities. The token is a governance instrument only and is not intended to represent securities, commodities, or financial instruments under applicable law.

In line with the **BVI Virtual Assets Service Providers Act, 2023 (VASP Act)**, NexusWealth Foundation Ltd. does not engage in activities such as exchange services, custodial wallet services, or third-party asset transfers that would require registration as a Virtual Asset Service Provider. Instead, the Foundation's role is limited to issuing its own governance tokens and administering decentralized governance processes in compliance with its Memorandum & Articles of Association.

Token sale activities are conducted under **Regulation D (for accredited U.S. investors)** and **Regulation S (for non-U.S. investors)** exemptions, with all participants subject to **AML/KYC checks** as required by law. Smart contract transfer restrictions and whitelisting ensure that secondary trading aligns with applicable regulatory frameworks.

Through this structure, NexusWealth Foundation Ltd. maintains a clear regulatory distinction between its **ecosystem governance role** and regulated financial services, ensuring compliance while enabling a decentralized, community-driven asset management platform.
